

Securing Data in SCM, CRM, and ERP Systems

A Strategic Approach for ABC Company

Jamal Johnson

March 17th, 2025

Importance of Data Security

Significance of Data Security in SCM, CRM, and ERP Systems

- **Confidentiality:** Protect sensitive customer and business data from unauthorized access.
- **Integrity:** Ensure accurate and reliable data for informed decision-making.
- **Compliance:** Meet regulatory requirements (e.g., GDPR, HIPAA) for data protection.
- **Operational Continuity:** Prevent disruptions from cyberattacks and maintain business operations.
- **Competitive Advantage:** Build customer trust and loyalty, enhancing market position.

Security Threats in SCM Systems

- Example 1: Data Breach (unauthorized access to sensitive supply chain data)
- Example 2: Ransomware (holding data hostage)

Security Threats in CRM Systems

- Example 1: Phishing Attacks (targeting customer data)
- Example 2: Insider Threats (employees misusing access)

Security Threats in ERP Systems

- Example 1: SQL Injection (exploiting vulnerabilities in databases)
- Example 2: Malware (infecting system to steal data)

Consequences of Security Breaches

- Customer Trust Loss
- Financial Penalties
- Reputational Damage
- Legal Repercussions

Security Measures for SCM Systems

- Measure 1: Data Encryption
- Measure 2: Access Controls

Security Measures for CRM Systems

- Measure 1: Multi-Factor Authentication
- Measure 2: Employee Training

Security Measures for ERP Systems

- Measure 1: Regular Security Audits
- Measure 2: Patch Management

Dependencies for Security

- Staff Training
- Budget Allocation
- Executive Support
- Customer Awareness
- Communication Strategy

Vendor Responses to Security Threats

- **Secure Development:**
- **SAP:** Secure SDLC, automated scans
- **Oracle:** Critical Patch Updates, security testing
- **Salesforce:** Code analysis, penetration testing
- **Data Encryption & Access Control:**
- **SAP:** Data Custodian, encryption
- **Oracle:** Transparent Data Encryption (TDE)
- **Salesforce:** Shield Platform Encryption
- **IAM & Threat Detection:**
- **SAP:** Identity Management, MFA, Threat Detection
- **Oracle:** Identity Cloud Service (IDCS), Cloud Guard
- **Salesforce:** MFA, Event Monitoring, AI analysis
- **Compliance & Patching:**
- **All:** GDPR, HIPAA, SOC 2, ISO 27001 compliant
- **Regular updates and automated security patches**

Conclusion

- In conclusion, securing SCM, CRM, and ERP systems is critical for the success and reputation of ABC Company. By understanding the threats and implementing robust security measures, we can protect our data and maintain stakeholder trust."
